## New Service Notification

# Positive Material Identification Program

**LINDQUIST STEELS, INC. THE TOOL STEEL SPECIALISTS**

Since 1944 Lindquist Steels has been a leading distributor of the highest quality specialty tooling materials. We have always prided ourselves for offering finest Tool Steels coupled with fast and efficient service and delivery.

In order to maintain our reputation and deliver the level of confidence and satisfaction our customers have come to expect, we have taken the industry lead in quality assurance, Lindquist Steels is now employing the use of several Niton Alloy Analyzers.

These powerful alloy analyzers are being utilized to verify and positively identify all incoming material. This allows us to ensure that the material we purchase from our approved sources is in fact the correct grade and manufactured to the correct chemistry. The alloy analyzers are fast, non-destructive, and the best step in eliminating possible mixed material from the mill. This added assurance is just another reason so many manufacturers put their trust in Lindquist Steels to supply them with elite material.

As an added service, the Niton Alloy Analyzers are also available to our customers for use at their facilities to identify material under the supervision of our trained personnel. We will also accept material sent to our offices for analysis.

Lindquist Steels is the first and only Tool Steel distributor to offer this level of quality control and service.

To learn more about our "Positive Material Identification Program" or to learn more about our other quality control practices, or to schedule a Niton demonstration please contact us.
